Cardholder signature: _____

Tests are graded and responses mailed within a few days of receipt. To check on the status of a test or for other test-related questions, call 800.947.4746.

This test is intended for use by allied dental personnel as well as dentists. Making copies of the blank test for use within a practice is acceptable.

The American Dental Association is an ADA CERP Recognized Provider. Continuing education credits issued for participating in the CE activity may not apply toward license renewal in all licensing jurisdictions. It is the responsibility of each participant to verify the CE requirements of his/her licensing or regulatory agency.

Continuing Education Exam

Please circle True or False for each question.

- | | | | |
|-----|---|------|-------|
| 1. | The hepatitis B virus (HBV) and the human immunodeficiency virus (HIV) are bloodborne pathogens. | True | False |
| 2. | Occupational exposure to blood and saliva may occur in several ways, such as parenteral exposure, contact with mucous membranes, or contact with skin | True | False |
| 3. | An example of parenteral exposure is spatter from blood or saliva. | True | False |
| 4. | It is possible to be exposed to a virus but not become infected. | True | False |
| 5. | The scrubbing phase of a handwash should last for two minutes. | True | False |
| 6. | You only need to wash your hands after using gloves, not before and after. | True | False |
| 7. | It is the employee's choice whether or not they wish to wear personal protective equipment (PPE). | True | False |
| 8. | OSHA requires employers to check for new safer needle devices at least annually, and must consult employees who work with needles and document the process. | True | False |
| 9. | Employees can use gloved hands to pick up broken glassware that may be contaminated. | True | False |
| 10. | Employees should be trained on the Bloodborne Pathogens Standard when they begin work involving occupational exposure, and after that at least annually or whenever there are changes in tasks or procedures. | True | False |
| 11. | Safety Data Sheets can be requested from the chemical manufacturer. | True | False |
| 12. | As part of the 2012 Hazard Communications Standard Final Rule, employees must be trained to recognize Hazard Communication Standard pictograms and labels for hazardous chemicals. | True | False |
| 13. | There are over 100 pictograms, and employees must be trained to recognize all of them and know the hazards they represent. | True | False |

Please circle True or False for each question.

- | | | |
|---|------|-------|
| 14. Employees are responsible for providing their own personal protective equipment (PPE). | True | False |
| 15. Contaminated reusable sharps, such as scalers and explorers, must be placed in containers that are puncture resistant, leakproof, marked with the biohazard symbol or color coded, and designed in a manner that does not require employees to reach into the containers. | True | False |
| 16. Employees may take protective clothing home to launder if it is transported in properly labeled bags. | True | False |
| 17. If an employee has an exposure incident, he or she must report it to their state dental society immediately. | True | False |
| 18. Employers are required to train all employees on hazardous chemicals found in the workplace both when the employee starts working, and if new hazards become present in the workplace. | True | False |
| 19. Employee medical records are kept for the length of employment plus five years. | True | False |
| 20. If an employee refuses a hepatitis B vaccination, his or her job may be terminated. | True | False |
| 21. Hazardous chemicals must be labeled if they are transferred from their original container to an unlabeled secondary container, except when done so only for immediate use. | True | False |
| 22. Employees who have had an exposure incident are responsible for the costs of their post-exposure evaluation and follow-up. | True | False |
| 23. In the event OSHA calls the office, employees should refer the call to the dentist or compliance manager. | True | False |
| 24. Studies suggest that there is a greater risk of infection from parenteral exposure than exposure through mucous membranes or nonintact skin. | True | False |
| 25. A person's resistance to a particular causative agent can be affected by many things, such as heredity, underlying disease, and use of medications. | True | False |
| 26. Tuberculosis and measles are examples of diseases that can be spread by airborne transmission; the hepatitis B virus is not. | True | False |
